Platform Engineer Intern - KIT

Join the AI Revolution in Program Management

About aiNions

We're not building another tool. We're creating AI employees.

aiNions is on a mission to transform how enterprises manage programs. We're building "Nions" — intelligent, human-like, and responsibly autonomous AI Program Managers that don't just assist, but actually *work* alongside your team.

Here's the reality: enterprises invest $1.4 trillion annually on program managers, yet only 35% of programs succeed. We're changing that.

Our first product, **Nion**, is an AI Release Manager that handles release planning, risk management, cross-functional coordination, and stakeholder communication — operating like a tireless colleague who never drops the ball.

Our Leadership Team:

- **Kumar Sudarsan — CEO & Co-Founder** Co-founder of Qwikcilver (backed by Accel, Helion, Amazon & acquired by Pine Labs). 32+ years in IT and enterprise software. M.Sc. Mathematics, B.E. CS from BITS Pilani.
- **Rangan Sen — CTO & Co-Founder** Ex-Head of Architecture at SymphonyAI, startup founder, built systems at Yahoo! and Amazon. 27+ years in scalable systems and GenAI. M.E. EE from IISc Bangalore.
- **Adithya Chandrashekar — Head of Product & Co-Founder** Ex-Director of Product at Truecaller and Qwikcilver. 18+ years in product and tech. MBA from SMU, B.E. CS from VTU.
- **Suryanarayanan B — Board Director** Ex-Director at Intel and NXP Accelerates Edge AI with Kinara Acquisition . 30+ years in business development and GTM. IIM Kozhikode alumnus.
- **Thirumalesh C — Advisor** Ex-CPO at Qwikcilver, Hyperion, IBM. 25+ years in product and tech. B.E. ECE from NITK Surathkal.

We're a team of builders from BITS Pilani, IISc, IIMs, NITK, and top tech companies who've scaled products to millions of users. Now we're building something category-defining.

The Role

We're looking for a **Platform Engineer Intern** who wants to build the infrastructure that powers the next generation of AI workers.

This isn't a "fetch coffee and watch" internship. You'll be writing real code, deploying to production, and learning from engineers who've built systems at Amazon, Yahoo!, and successful startups.

What You'll Build

- Cloud-agnostic infrastructure (AWS, Azure, GCP) that scales to hundreds of concurrent enterprise users
- CI/CD pipelines and infrastructure-as-code using Terraform, Kubernetes, and modern DevOps practices
- Monitoring and observability systems using Prometheus, Grafana, and distributed tracing
- Security architectures that meet enterprise compliance requirements (SOC 2, ISO 27001)
- Database systems including PostgreSQL and Neo4j for our knowledge graph

---

What You'll Learn

- How to design systems that achieve 99.9% availability
- Enterprise security patterns: encryption, authentication (OAuth, SAML, JWT), secrets management
- The art of building cloud-agnostic architectures that work anywhere
- How AI agents interact with enterprise tools like Jira, Slack, and Teams
- What it takes to build a startup from early stage to scale

What We're Looking For

- Currently pursuing B.Tech/M.Tech in Computer Science or related field
- Familiarity with at least one cloud provider (AWS, Azure, or GCP)
- Basic knowledge of Linux, Docker, and containerization concepts
- Some experience with Python scripting
- Understanding of networking fundamentals (TCP/IP, DNS, HTTP)
- Curiosity about AI/ML systems and how they work in production
- Most importantly: a hunger to learn and build things that matter

Bonus Points:

- Experience with Kubernetes
- Exposure to infrastructure-as-code tools (Terraform, Ansible)
- Contributions to open-source projects
- Previous internship or project experience in DevOps/SRE

Why aiNions?

🚀 **Ground Floor Opportunity** Join a category-creating company at the earliest stage. Your work will directly shape our product and infrastructure.

🧠 **Learn from the Best** Work alongside engineers who've built systems at Amazon, Yahoo!, and scaled successful startups. Our CTO has 27+ years of experience in scalable systems and GenAI.

💡 **Real Responsibility** No busy work. You'll work on production systems that power Peeku.nion, participate in architecture discussions, and ship code that matters.

🎯 **Cutting-Edge Tech** Work with the latest in AI orchestration, multi-agent systems, Kubernetes, and enterprise integrations.

📈 **Career Launchpad** Get mentorship, build your portfolio with real enterprise-grade projects, and potentially convert to a full-time role.

Internship Details

- **Location:** Bangalore (In person)
- Office Address: aiNions Solutions Pvt Ltd. 2nd Floor, Rockline Centre, Craig Park Rd, Craig Park Layout, Ashok Nagar, Bengaluru, Karnataka 560025
